

— ARC · CURATIO SIGNATURE PROGRAMME

The *Longevity* Intelligence Package

A physician-designed programme uniting epigenetic profiling, advanced biomarker analysis, and structural diagnostic imaging into one unified health intelligence assessment. Designed not for reassurance — but for precision intervention, before disease declares itself.

— PROGRAMME INCLUSIONS

FOUNDATION ASSESSMENT

Lifestyle, Epigenetic & Biomarker Intelligence

Extensive blood panel covering metabolic, hormonal, haematological, inflammatory, and organ-function markers. Epigenetic analysis to determine biological age, gene expression risk patterns, and root-cause vulnerabilities not visible on conventional diagnostics. Anchored by a full consultative evaluation — dietary habits, sleep architecture, stress load, and movement history — with a personalised predictive intervention strategy.

01

CARDIOVASCULAR

02

CTA Coronary + Calcium Score

CT Coronary Angiography with Coronary Artery Calcium scoring — the gold standard in asymptomatic cardiovascular risk stratification. Identifies arterial plaque burden and stenosis with precision unavailable through standard cardiac screening, enabling early intervention before the first clinical event.

COLORECTAL

03

CT Virtual Colonoscopy

Non-invasive full colonic visualisation delivering diagnostic precision equivalent to optical colonoscopy — without sedation, preparation risk, or procedural recovery. Detects polyps, structural anomalies, and early malignancy with radiological accuracy.

MUSCULOSKELETAL

04

Bone Mineral Density (DEXA)

DEXA scan — the clinical standard for early detection of osteoporosis and osteopenia. Provides a quantitative bone density baseline for longitudinal tracking and timely preventive intervention before fracture risk escalates.

RM 9,888

ALL-INCLUSIVE · PHYSICIAN-SUPERVISED

What You Receive

- Comprehensive blood panel — metabolic, hormonal & inflammatory markers
- Epigenetic profiling — biological age & predictive vulnerability mapping
- Full physician lifestyle consultation with personalised strategy report
- CT Coronary Angiography with Calcium Score
- CT Virtual Colonoscopy — no sedation required
- DEXA Bone Mineral Density scan
- Consolidated results review with our panel of doctors

Designed For

Ages 40 and above

Executives & high-performers

Family history of heart disease

Family history of colorectal cancer

Post-menopausal women

Proactive longevity planning

Annual health review

Unexplained fatigue or metabolic change

BEGIN YOUR ASSESSMENT

Know your body before it *speaks first*.

Appointments are limited. Reserve your consultation today.
